

Conserving Water At Home

10 ways to reduce your consumption, lower your bills, and help the environment

Upgrade Your Appliances

Turn Off The Tap

For every minute that a faucet runs two gallons of water are used.

Water Your Lawn Right

Water during sunrise or sunset to avoid losing water to evaporation.

Cut Your Grass Effectively

Keep your grass height at 2 inches to give it shade and help it retain moisture.

Use Grey Water

Grey water is relatively clean, used water from your bathroom sinks, showers, washing machine, & other appliances. It can be reused to water plants and gardens.

Use your dishwasher wisely

New dishwasher models use less water than hand washing and clean more thoroughly let you skip a pre-wash!

Compost

Garage disposals use a lot of water and they also add a considerable amount of solids to your septic tank. Compost instead!

Check For Leaks

A faucet leaking at one drip per second can waste 3,000 gallons a year

Take Shorter Showers

Reuse and Re-wear

Save water on laundry loads by re-wearing lightly worn clothes
