

6 easy steps to save electricity at home

GEYSER: It uses 40% to 60% of your electricity. Have its temperature turned down to 60 degree celsius by and switch it off when not in use.

SHOWER: It uses less hot water than bathing. Using less hot water means less work for the geyser. Make sure you have a low flow shower.

STAND-BY ELECTRICITY: Don't leave your appliances and phone chargers in stand-by mode. They still use upto 50% of their operating power.

REFRIGERATION: Close your fridge door quickly it will use less power to get back to its cooling level. Do NOT switch your fridge off.

HEATING: Use a gas heater instead of electric one. If you use a electric heater, make sure it's an energy efficient one.

COOKING: Use a microwave oven instead of electric one. It uses much less electricity.
